EDUCATION

Pontifical Catholic University of Paraná | *B.Sc. Computer Science* **2024 – 2028**

- Expected graduation: June 2028 | Operating Systems, Network Security, Databases, Data Structures

Swiss School of Curitiba | *High School & IB Bilingual Diploma* **2017 – 2020**

EXPERIENCE

Court of Justice of Paraná (TJPR) **Curitiba, Brazil**

DevOps / IT Intern

Aug 2021 – Dec 2022

- Designed and implemented CI/CD pipelines using GitHub Actions, Docker, and Docker Compose for automated testing, building, and deployment of web applications.
- Managed containerized application lifecycle across cloud platforms (AWS EC2, GCP Compute Engine), handling provisioning, deployment, and monitoring.
- Standardized development environments with Docker containers, reducing configuration drift between development and production deployments.

PROJECTS

Production-Grade Container Platform | *20+ Services, Two-Node Cluster* **Ongoing**

- Architected and operate a two-node Proxmox VE cluster hosting 20+ containerized services (Docker/LXC), including media servers, NVR, private cloud, monitoring, and home automation — treating personal infrastructure with production-level reliability standards.
- Engineered automated backup orchestration: dedicated secondary node manages all VM/container snapshots with offsite replication to Google Drive, ensuring disaster recovery readiness across the entire platform.
- Deployed high-availability DNS (PiHole across both nodes), eliminating single points of failure; configured ZFS storage with proactive disk health monitoring and hands-on failure recovery experience.
- Implemented GPU-accelerated transcoding pipeline (Quadro P400): PCI passthrough for Jellyfin VM and device mapping for Tdarr LXC, enabling distributed H.265 encoding across the cluster.

Observability & Secure Access Architecture | *Monitoring, VPN, Zero Trust* **Ongoing**

- Deployed comprehensive monitoring stack: Prometheus for metrics collection, Grafana for visualization and alerting, and Scrutiny for predictive disk failure analysis via S.M.A.R.T. data.
- Engineered multi-layer access architecture: WireGuard VPN with Nginx reverse proxy for internal services, Cloudflare Zero Trust with TOTP for public-facing endpoints.
- Configured VLAN network segmentation (IoT/production) with OPNsense firewall rules; automated SSL/TLS certificate management via Certbot with Cloudflare DNS challenges.
- Manage identity infrastructure: self-hosted Vaultwarden for credential management and PocketID for centralized authentication.

TECHNICAL SKILLS

Containers & Virtualization Docker, Docker Compose, LXC, Proxmox VE (multi-node), GPU passthrough, systemd

CI/CD & Automation GitHub Actions, Bash Scripting, YAML/IaC, Python, automated backup pipelines

Monitoring & Observability Prometheus, Grafana, Scrutiny (S.M.A.R.T.), log analysis

Networking & Security Nginx, WireGuard, Cloudflare (Tunnels/Zero Trust), OPNsense, PiHole, SSL/TLS, VLANs

Cloud & Infrastructure AWS (EC2), GCP (Compute Engine), Linux Admin (Arch/Debian), ZFS, RAID

Languages Portuguese (Native), English (Fluent), German (Intermediate)

CERTIFICATIONS

Cambridge Advanced English (CAE – B2) | Deutsches Sprachdiplom (DSD – B1/B2) | Currently pursuing: AWS Certified Cloud Practitioner (CLF-C02)
